DeltaTherm® PHM

Intelligent distribution of excess PV current to different loads

DeltaTherm® PV

Direct control of an electric immersion heater in the store

FlowSol® E

Optimum store stratification and energy use

The products from our "PV heating" category enable you to use your PV current e.g. by converting excess current into thermal energy.

They form the missing link between the photovoltaic system and the heat generator – for more independence, decreased heating costs and less CO₂ emissions.

DeltaTherm® PHM

The DeltaTherm® PHM is the ideal solution for using excess PV current for the control of different loads. Heat pumps, electric immersion heaters, and charging stations for electric vehicles can be controlled as needed.

DeltaTherm® PV

The DeltaTherm® PV is used for the direct and stepless control of an electric immersion heater in the store. Installation is quick and easy.

FlowSol® E

The FlowSol® E electrothermal station is equipped with a HE pump as well as with an electric heating up to 3 kW. Intelligent control technology enables optimum store stratification, e.g. loading of the upper store zone for optimum energy use.
